Baby DEBUT

4 - D ULTRASOUND

Baby Debut is the latest 3D/4D imaging available to view your unborn baby. We use a new state of the art 2018 GE Voluson E6 for all of our imaging. Our scans are performed by registered ultrasonographers with over 20 years experience in women's healthcare.

Bond with your unborn child in live-motion 3D/4D ultrasound.

We concentrate on photo quality images of the:

- fetal face and extremities
- hands and feet

We recommend 28-32 weeks as the "ideal time" for a 3D/4D scan. Factors that may interfere with the quality of the images include amniotic fluid volume, fetal position and maternal weight. If you are not completely satisfied with your session, you may try again at a later date for a small sitting fee.
